How can a company that has never turned a profit have a multibillion dollar valuation? Why do some start-ups attract large investments while others do not? Aswath Damodaran, finance professor and experienced investor, argues that the power of story drives corporate value, adding substance to numbers and persuading even cautious investors to take risks. In business, there are the storytellers who spin compelling narratives and the number-crunchers who construct meaningful models and accounts. Both are essential to success, but only by combining the two, Damodaran argues, can a business deliver and sustain value. Through a range of case studies, *Narrative and Numbers* describes how storytellers can better incorporate and narrate numbers and how number-crunchers can calculate more imaginative models that withstand scrutiny. Damodaran considers Uber's debut and how narrative is key to understanding different valuations. He investigates why Twitter and Facebook were valued in the billions of dollars at their public offerings, and why one (Twitter) has stagnated while the other (Facebook) has grown. Damodaran also looks at more established business models such as Apple and Amazon to demonstrate how a company's history can both enrich and constrain its narrative. And through Vale, a global Brazil-based mining company, he shows the influence of external narrative, and how country, commodity, and currency can shape a company's story. *Narrative and Numbers* reveals the benefits, challenges, and pitfalls of weaving narratives around numbers and how one can best test a story's plausibility.

Aswath Damodaran, distinguished author, Professor of Finance, and David Margolis, Teaching Fellow at the NYU Stern School of Business, have delivered the newest edition of *Applied Corporate Finance*. This readable text provides the practical advice students and practitioners need rather than a sole concentration on debate theory, assumptions, or models. Like no other text of its kind, *Applied Corporate Finance*, 4th Edition applies corporate finance to real companies. It now contains six real-world core companies to study and follow. Business decisions are classified for students into three groups: investment, financing, and dividend decisions.

Renowned valuation expert Aswath Damodaran reviews the core tools of valuation, examines today's most difficult estimation questions and issues, and then systematically addresses the valuation challenges that arise throughout a firm's lifecycle in *The Dark Side of Valuation: Valuing Young, Distressed and Complex Businesses*. In this thoroughly revised edition, he broadens his perspective to consider all companies that resist easy valuation, highlighting specific types of hard-to-value firms, including commodity firms, cyclical companies, financial services firms, organizations dependent on intangible assets, and global firms operating diverse businesses. He covers the entire corporate lifecycle, from "idea" and "nascent growth" companies to those in decline and distress, and offers specific guidance for valuing technology, human capital, commodity, and cyclical firms.
