STUDY GUIDE - ATOMIC STRUCTURE. The current atomic theory has come about over the past 2000 years. In the beginning, Democritus proposed the idea that all things were made of particles too small to see. He was laughed at. In the 1800's. John Dalton. proposed the idea of the "Atomic Theory". He had 5 theories, 3 of which are still believed today. They are:

X-ray crystallography (XRC) is the experimental science determining the atomic and molecular structure of a crystal, in which the crystalline structure causes a beam of incident X-rays to diffract into many specific directions. By measuring the angles and intensities of these diffracted beams, a crystallographer can produce a three-dimensional picture of the density of electrons within the ...
