A rough, general rule some players use is to make sure your bass can keep up with the guitar, you want your bass amp to put out anywhere from two to four times more wattage than the guitar amp. (There are many factors that can affect this, not least of which are the bass amp speaker configuration, the efficiency of the speaker (s), your desired tone, the guitarist's tone, and more.

[How Many Watts of Bass Amp Do I Need? | Sweetwater](#)

You may have noticed that the technical information on the back panel of your bass cabinet includes a "power rating" spec consisting of two different wattages, one labeled "continuous" and the other labeled "program", with the latter being twice the amount of the former. Take a Fender Bassman 810 Neo cabinet, for example, which says "POWER RATING 1,000w continuous, 2,000w program" on the back.
