The definition of

congruent triangles

tells us that when two

triangles are con-

gruent, each pair of

corresponding sides

are congruent and

each pair of corre-

sponding angles are

congruent. We use

three pairs of

corresponding parts,

File Type PDF

Congruence In

SAS, ASA, or SSS, to
prove that two
triangles are
congruent.

When teaching
triangle congruence,
overlapping triangles
appear at some point.
I always teach

File Type PDF Congruence In

students to draw the triangles separately before making any conclusions. This activity/demonstration helps students create overlapping triangles and separate them to see the triangles individually. First, fold one corner of a piece of paper to form a triangle.

A Since GF is the same length in both triangles, the SAS Triangle Congruence Theorem can be used to justify $GF = GF$. B Since GF is a segment shared by both triangles, the Reflexive Property of Congruence can be used to justify $GF = GF$. C Since GF is on a leg of both triangles,

the HL Triangle

Congruence Theorem
can be used to justify
 $GF = GF$.
