Useful for the first three years of Secondary school, this is a three book series. It provides an introduction to the world of Science and is a helpful foundation for CXC separate sciences and CXC single award Integrated Science. Written in clear English, it is suitable for a range of abilities.

How does Einstein ' s description of space and time compare with Doctor Who? Can James Bond really escape from an armor-plated railroad car by cutting through the floor with a laser concealed in a wristwatch? What would it take to create a fully intelligent android, such as Star Trek ' s Commander Data? Exploring Science Through Science Fiction addresses these and other intriguing questions, using

science fiction as a springboard for discussing fundamental science concepts and cutting-edge science research. It includes references to original research papers, landmark scientific publications and technical documents, as well as a broad range of science literature at a more popular level. The revised second edition includes expanded discussions on topics such as gravitational waves and black holes, machine learning and quantum computing, gene editing, and more. In all, the second edition now features over 220 references to specific scenes in more than 160 sci-fi movies and TV episodes, spanning over 100 years of cinematic history. Designed as the primary text for a college-level course, this book will appeal to students across the fine arts, humanities, and hard sciences, as well as any reader with an interest in science and science fiction. Praise for the first edition: "This journey from science fiction to science fact provides an engaging and

surprisingly approachable read..." (Jen Jenkins, Journal of Science Fiction, Vol. 2 (1), September 2017)

David Klahr suggests that we now know enough about cognition—and hence about everyday thinking—to advance our understanding of scientific thinking.

The Association for Science Education Book Award 2016, Finalist. Science in the early years is about more than developing understanding of key scientific concepts, it is about encouraging imagination, creativity and curiosity and nurturing key scientific skills to form a firm base for learning. Understanding how best to do this for young

children aged 3-7 is the focus of the book. By concentrating on practical and naturally occurring experiences the authors look at meeting the needs of the curriculum with children at the centre of their own learning. Chapters look at how to work with children to: Find out and develop their own ideas Get them inquiring scientifically Use evidence to support their views This book will really help develop the whole child across the curriculum and make sure they have the skills they need for later learning.
