Quadratic functions may have zero, one or two roots. An easy example is the following: $f(x) = x^2 - 1$. When setting $x^2 - 1 = 0$, we see that $x^2 = 1$. This is the case for both $x = 1$ and $x = -1$. An example of a

Roots Of

Quadratic equation. There are following important cases. If $b^2 < 4ac$, then roots are complex (not real).

For example roots of $x^2 + x + 1$, roots are $-0.5 + i1.73205$ and $-0.5 - i1.73205$. If $b^2 = 4ac$, then roots are real and both roots are same.
