In reality, buses usually come in twos. Only on long bus routes is it common for buses to come in threes. The reason for this phenomenon is that buses often make long stops to allow large groups of passengers to board. When this happens, the next bus on the route usually approaches before the bus preceding it departs. A bus route must be very long for a third bus to join the bunch. Therefore, buses usually

The old joke that you wait ages for one bus, then three come along at once, is bordering on cliché. But it's also, as it turns out, true - not just because of bad planning, but also because of maths. The phenomenon is so common, in fact, that it has a choice of names. Bus bunching, clumping, convoying, platooning - all relate to the depressing reality that, over any length of time, buses serving a single route are likely to end up tootling along directly behind each other.

Published on Oct 6, 2015 in Trivia. Well ... the short answer is they don't! However our instinct behind the feeling that this DOES occur is not really far off ... They actually come in twos ! In order to investigate the bus phenomenon we'll have to devise what is known as a mathematical model - a simplification of the real situation with some invented figures.

First of all, a small disclaimer. It's actually far, far more likely that the buses will arrive in twos. The usual saying is great; we like to over-emphasize things when complaining and three is a very powerful number in the English language (think Goldilocks and the three Bears, three attempts to guess Rumpelstiltskin's name, the rule of three when using adjectives etc.).

Originally Answered: Why do school buses come to a complete stop at the train tracks and open their doors even when there is no stop sign and it's literally in the middle of traffic? It's the law that we do that and it's in case the train tracks alarm isn't working properly and because the bus is long and we have kids on board that we have to make sure that we could make it safely and not get hit by train.
